Re: Load Testing of Kinedyne Chair Track Rails as Welded to
the Floor of a Ford 250 Van

Gentlemen:

Conam Inspection has witnessed the load testing of Kinedyne chair rail track which was welded to the floor of a Ford 250 van. The purpose of this test was to determine if the welded track would hold up to the 6000 pound load as specified by Kinedyne with the track bolted to the van floor.

Two one inch web FE 501 securement straps were looped around the chair frame to secure the chair to the welded track. A pull load of 6000 pounds was applied to the chair and held for five minutes. A visual inspection of the track welds showed no sign of failure.

Sincerely,

Conam Inspection, Inc.

William J. Power
